INVESTMENT STRATEGY

A combined strategy of investing in stocks and bonds, including their equivalent financial instruments, with the aim of increasing the value of assets at a lower risk than the equity market. This is achieved through the active portfolio management using a variety of investment objects such as collective investment undertakings, stocks, debt securities, derivatives or alternative investments. The strategic weight for asset classes other than debt securities is around 80%, but the share of these investments can vary between 60% and 100% of the assets depending on market conditions and other circumstances. This means that the proportions of fixed income, equities and alternative investments can vary significantly between periods. Proportion of alternative investments may represent up to 30% of the assets. Derivatives can be used to hedge against currency exchange rate change risk.

COMMENT

The last quarter of 2024 was a volatile one for stock markets. US equities continued to be the clear leader in terms of index returns, boosted by Trump's election as President. The euro fell by 7% against the US dollar, which had a favourable impact on returns of the investment basket. In total, developed country shares appreciated by 7.6% in euro terms in Q4, while emerging market equities fell by 0.9%. The S&P 500 index of US shares rose by as much as 10.3% in euro terms (2.4% in US dollar terms), while the STOXX 600 index of European shares fell by 2.9%. In Q4, investors and analysts discussed topics that have been relevant throughout 2024 - inflation and interest rates, the state of the European Union economies and their growth prospects and geopolitical events. For our Central European region, the situation in Ukraine is the most pressing. Market participants believed the likelihood of a ceasefire has increased with Trump's victory. If a sustainable ceasefire is reached, it could be a positive factor for the region's (including the Baltic States) equities. The world's two main central banks, the US Federal Reserve System (Fed) and the European Central Bank (ECB), have extended their interest rate cutting cycle and cut interest rates 2 times each in Q4. However, after Trump's victory, there has been a marked change in expectations regarding possible changes in US economic policy. Higher tariffs, lower corporate tax and higher budget deficits are expected. The change in outlook fueled inflation fears, pushing up yields on US long-term government bonds by around 0.75 percentage points. Meanwhile, in Europe, bond yields have moved little, as euro area inflation has been close to the ECB's target of 2% for some time. In Central and Eastern Europe, credit agencies due to positive economic prospects upgraded the credit ratings of Croatia, Serbia, Moldova, Montenegro, and Albania. The rebalancing process has reduced the exposure in the basket to large technology companies (the Magnificent Seven) which lately had extremely high valuations. During the quarter, the portfolio also included positions into several new bond issuers. MLP Group, a Polish company with relatively low debt and a good tenant retention rate, placed bonds at an attractive yield of 5.63%. We invested in two investment-grade Western European companies, Stellantis and Triodos Bank, with yields of 4.0% and 4.6%, respectively. We also participated in the primary market placement of the Moldovan Trans-Oil company while addressing potential liquidity issues.
